Problems with dashes in Code:

- When importing from LyX 2.1 (or older), rows of hyphens in “Code” logical markup are merged to dashes:
  
  okular -unique
  -- test.1
  +++ test.2

- Dashes are written as ligatures in Code → wrong output:
  serif: en–dash, em—dash;
  typewriter: en--dash, em---dash;
  code: en–dash, em–-dash;
